

# TRS URD Project Update

# TRS URD Project Update

- TRS URD go live set for September 2024
  - We anticipate this to include both VRS and IP CTS services
- Rolka Loubé is working on the finalization of the application, the accompanying filing instructions, as well as the process documentation necessary for Providers to have a successful go live.
- We are working on decisions with the FCC to further refine and clarify the rules of the URD including any public notices and orders/rulemakings that may be necessary for go live.

# TRS URD Project Update – What's New for VRS

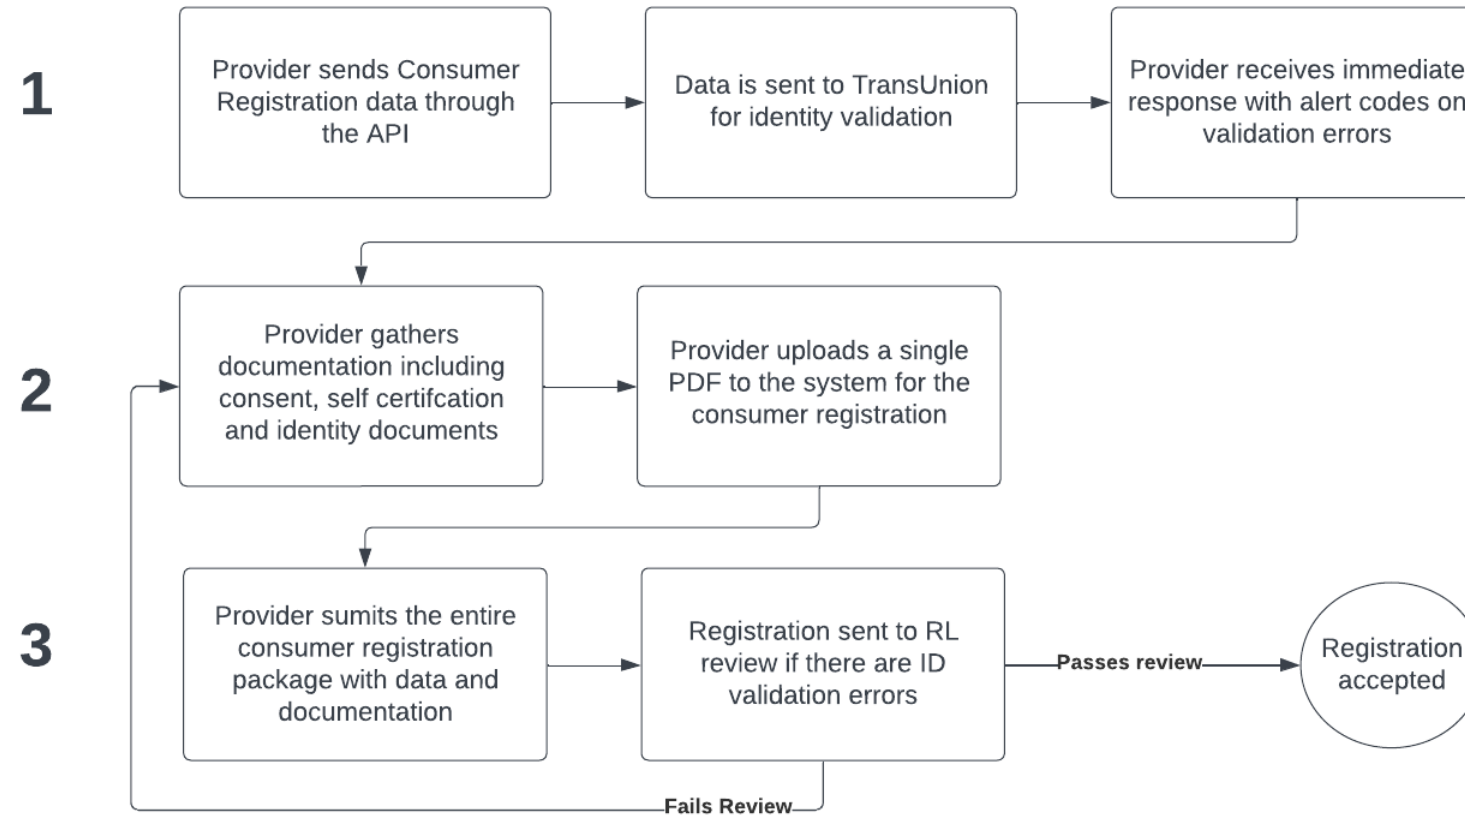

- When we go live with the updated VRS URD the following changes will be in effect.
  - API/UI based system
  - Identity validation provider will change from LexisNexis to TransUnion and will provide near real-time results
    - We will be using a TransUnion ID to identify where we have duplicate individuals in the current URD and do clean up to merge those individuals
  - Enterprise devices will be required to be registered in the URD and there will be a 120-day registration window to add existing devices into the URD once it goes live

# TRS URD Project Update – What's New for VRS

The following are the data elements that will be sent via API to Rolka Loube from the Providers to register an Enterprise device:

- Name of the organization, business, or agency where the device is located
- Physical address of the Organization
- Registered location of the device
- Whether the device is a public or enterprise videophone, and the location type
- Service initiation date
- Name of the individual responsible for the device (Organization POC)
- Whether or not the device is assigned to a hearing individual who knows sign language

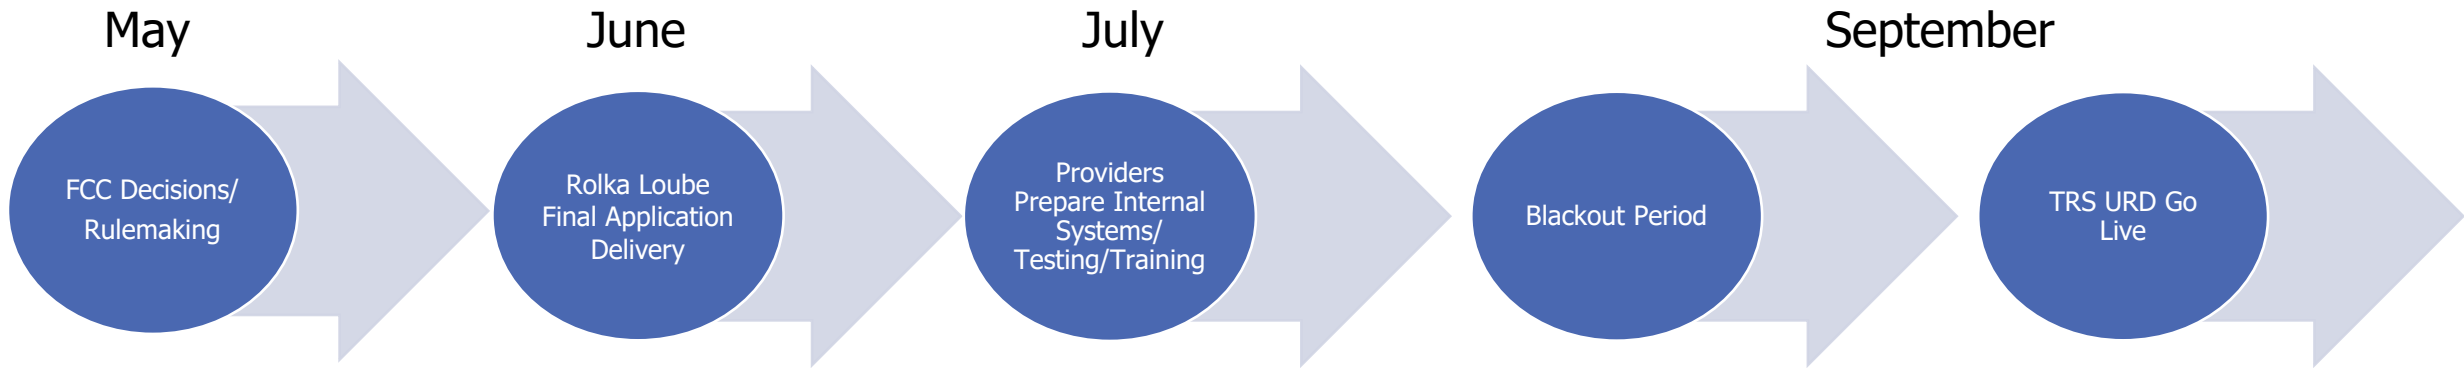

# TRS URD Project Update – Consumer Registration Process

# TRS URD Project Update – IP CTS

- The following are differences between VRS registrations and IP CTS registrations
  - IP CTS uses an Electronic Serial Number (ESN), username, or login rather than a Ten Digit Number (TDN)
  - Enterprise devices are currently only allowed for emergency shelter locations or Federal facilities
  - All consumers must be registered – no head of household
  - The Hearing User designation only applies to VRS
  - Ports only apply to VRS
  - During the one-year open registration window Rolka Loube will be manually reviewing all IP CTS registrations

# TRS URD Implementation Timeline

April 23, 2024
